I'd trust you fucks with my IP address about as much as I'd trust you to not downvote comments just because you disagree with them.

That's why it supports Tor. You can go the extra mile with a [good VPN](#).

Does it use some other protocol over Tor? I heard you're not supposed to torrent over the network, as it clogs it up.

The site linked is a proxy/gateway into ZeroNet. The client to view + host it yourself is cross-platform and opensource over at Zeronet.io

You can think of it a lot like bittorrent, but for web pages. I think there's a lot of potential for this project, assuming it gets more awareness/users. The exciting part is that there are no "servers", only peers. This is the web hosting of the future.

Interesting stuff. can you tell us how much space/bandwidth will be used to host these pages? will pages only load to 69.7% for weeks at a time if there are no seeds available?

You may get a lot of users if voat gets fucked over

To access properly, download [ZeroNet](#) and head over to the ZeroNet URL:  
<http://127.0.0.1:43110/1J1c7eML6uMwDU4uiKbKRxoqxGP6WMFMvb/>

All viewers help participate in the decentralized website. Exciting things await us!

Looks good man, did you create this?

- [permalink](#)

[\[-\] techguy5 \[S\]](#) 4 points (+4|-0) ago

Nah, someone else referred me to it - but I was surprised it wasn't more well known. [Source Code is available.](#)

Cool, I'll try to give it more activity, decentralization is the future of the web.
